Paratrachichthyinae Vent more advanced,
close behind ventral bases; abdominal
ferrae behind vent

05. *Paratrachichthys* Waite 1899

Hoplostethus

Hoplostethus n. subgenus. Body without
silvery lateral tube-like striae on
under surfaces. (*H. mediterraneus* Val.)

05. *Onchoplostethus* n. subg. [*H. melanopterus* n. sp.]
Silvery
lateral tube-like striate areas on chest,
breast, prepectoral region and along
abdominal edge. *H. metallicus* n. sp.

(a *oidos* tube + *Hoplostethus*)

Bathyseriops ^{not valid} new genus

Body elongate ovate, compressed.
Head small, truncated in front. Snout short, convex.
Eye large, before middle in head, deeper than long. Mouth small, low, jaws equal. Teeth very minute, form simple cutting edge, none on palate or tongue. Nostrils together, largely face forward, posterior deep vertical slit. Mandibular rami but little elevated inside mouth.
Gill rakers attenuated, 15 below. Scales very deciduous, moderate, cycloid, irregular. Sides of head with few scales, otherwise naked. Lateral line axial, complete, tubes simple,

Lein

moderate. Dorsal spines all uniformly low and short, anterior rays elevated. Anal like soft dorsal. Caudal peduncle short. Paired fins small. Caudal moderate, with well developed rudimentary rays. Type Bathyseriola siniceps Fowler.

Related to Bathyseriola Alcock 1890, from which it differs in the entirely different physiognomy, large eye, large scales and smaller paired fins.

Bathyseriola ^{simiceps} ~~megalops~~ new species

depth 3; head $3\frac{1}{3}$, width $1\frac{3}{4}$.

Snout 5 in head, end rather deeply truncate, length $1\frac{1}{2}$ in eye; eye 3, horizontal diameter $1\frac{1}{5}$ in vertical diameter, or $1\frac{1}{3}$ in interorbital; maxillary reaches $\frac{1}{8}$ in eye; length $4\frac{1}{8}$ in head; teeth minute, form close set and firm, even, trenchant cutting edge; interorbital $2\frac{4}{5}$, elevated convexly; preopercle edge convex. Gill rakers $4 + 15$, lanceolate, $1\frac{2}{3}$ in eye; gill filaments $\frac{4}{5}$ of gill rakers.

Scales ^(pockets) 52 in lateral line to caudal base; 10 above, 13 below, 11 predorsal forward opposite hind eye edge. Cheek, opercle and postocular with few large scales. Most of vertical

fins scaly basally. Scales with 2 or 3 basal radiating striae; circuli small, complete or only slightly obscured apically.

D. VII, 28, spines subequally short, fin height anteriorly $2\frac{1}{2}$ in head; A. III, 27, fin height $2\frac{7}{8}$; caudal 1, well forked; least depth of caudal peduncle $2\frac{3}{4}$; pectoral $1\frac{3}{5}$, rays I, 17; ventral rays I, 5, fin $3\frac{3}{4}$? in head.

Dark violaceous brown generally. Iris brown. Fins brownish. Inside gill opening blackish brown.

U. S. N. M., No. D. 5619.

Albatross Collection. L. T. 3557.

November 22, 1909. Length 170 mm.
Type.
